

Pipeline Execution Results

Pipeline Name: PL_Superstore_Copy

Execution Status: Succeeded

Execution Method: Debug / Trigger Now

Source: Azure Blob Storage (source-data container)

Destination: Azure Blob Storage (destination-data container)

Metadata Validation:

- File Name retrieved successfully.
- File Size retrieved successfully.
- Last Modified Date retrieved successfully.

Data Transfer Result:

- Source file was read successfully.
- Data was copied from the source container to the destination container.
- No errors occurred during execution.
- The copied file was verified in the destination container.

Outcome:

The pipeline executed successfully and completed the end-to-end data transfer workflow. The Get Metadata activity validated the source file before the Copy Data activity transferred the dataset to the destination container.
